

J.W. Winco, Inc. Shock Absorption Mounts have Conical Shape

J.W. Winco, Inc., a leading supplier of standard industrial machine components, now offers GN 253 Vibration/Shock Absorption Mounts, in inch and metric sizes.

These RoHS-compliant mounts are also known as shock absorbing mounts, vibration mounts, anti-vibration mounts, vibration bobbins, or rubber bumpers. They are frequently used as end-stop bumpers, e.g., for conveyor trolleys, and also function well as leveling feet. They absorb most of the accumulated kinetic energy on impact and act as dampers and prevent damaging shock and rebound. They can also act as sound dampers.

Mount body is NBR synthetic rubber, vulcanized, 55 durometer (shore hardness $\pm 5^\circ$). Cover plate is steel, zinc plated, blue passivated, molded in. Mounts are available with tapped inserts or threaded studs made of zinc plated, blue passivated, steel, molded in. Versions with 40 or 70 durometer natural rubber material are available upon request.

J.W. Winco offers an extensive selection of inch and metric size adjustable levers, cabinet U-handles, plastic and steel hinges and locking mechanisms, revolving and retractable handles, hand wheels, hand cranks, tube connection and conveyor components, inch and metric construction tubing, shock absorption mounts, leveling mounts, hand knobs, spring, ball and indexing plungers, jig, fixture and fastening components, retaining magnet assemblies, toggle clamps, metric casters and wheels, universal joints, oil sight glasses, and metric tools for the industrial and commercial equipment industries. J.W. Winco's website catalog, with 3D CAD and online buying, is viewable at www.jwwinco.com.
