

Bull's-Eye Levels from J.W. Winco, Inc. Have Mounting Flange

J.W. Winco, Inc., a leading supplier of standard industrial machine components, announced it now offers GN 2277 Bulls-Eye Levels with Mounting Flange, in metric sizes.

These RoHS-compliant bull's-eye levels are used to check the horizontal position of jigs, machines, devices, appliances, and instruments. The spirit levels are aligned in relation to the reference surface so that the bubble is located inside the marking ring when the horizontal position of the contact surface is achieved.

Housing is anodized aluminum with a natural color finish or black finish. Spirit level element has a glass plastic body, with a colorless-transparent filling. Casting compound is mineral-based. Two types are offered: with mounting flange for bolting to surface, or with mounting flange with collar for inserting into bore holes. Levels have a sensitivity of 30 angle minutes, with bubble able to move by 2 mm.

J.W. Winco offers an extensive selection of inch and metric size adjustable levers, cabinet U-handles, plastic and steel hinges and locking mechanisms, revolving and retractable handles, hand wheels, hand cranks, tube connection and conveyor components, inch and metric construction tubing, shock absorption mounts, leveling mounts, hand knobs, spring, ball and indexing plungers, jig, fixture and fastening components, retaining magnet assemblies, toggle clamps, metric casters and wheels, universal joints, oil sight glasses, and metric tools for the industrial and commercial equipment industries. J.W. Winco's website catalog, with 3D CAD and online buying, is viewable at www.jwwinco.com.
