

## **News from North East Fasteners**

North East Fasteners is very excited to welcome David Stoeke to its team as Director of Quality. With over 30 years of experience serving the aerospace, medical, power generation, and automotive industries, Dave also has a mechanical engineering degree and a Managerial Certification of Quality/Organizational Excellence Accreditation from the American Society for Quality (ASQ). An avid water skier, Dave is married with two children: a son is serving as a Staff Sergeant in the United States Air Force, and a daughter entering the University of Connecticut's Animal Science Program.

Soon after Martin Van Linter was appointed President of North East Fasteners in January 2022, two other highly respected individuals within the company were promoted to vice presidential positions: Richard Kowalczyk (V.P. of Manufacturing) and Adam Burton (V.P. of Information Technology). Both have been significant players within NEF, and we would like to congratulate them on their considerable accomplishments and new positions within NEF.

NEF has just added five new specialized slotting machines. These five machines constitute a major overhaul within its slotting department. NEF has instituted this complete upgrade to its equipment profile to allow for reduced lead times, better pricing, and a higher quality product. NEF customers rely upon NEF to provide extraordinary services and products, and this will go a long way to helping fulfill those expectations.

NEF is an AS9100D/ISO 9001:2015 and QSLM Levels 2/3 certified supplier, serving the commercial, military, aerospace, and automotive markets. NEF is currently producing a size range of -00- to number 10 diameter fasteners in all types and classes, as well as M1.2 to M4.5 (metric), up to 2 inches (50mm) long.
