

Nine Fasteners Unveils New Single Trunk Cable Clip Trunk

Press release date: May 1, 2015

Hopkinton, Mass. — Nine Fasteners Inc., an industry-leading manufacturer and distributor of fasteners, for more than three decades, continues its ascent in the solar industry by announcing the creation of a brand-new module mounted Enphase cable clip.

This quality product is made of 410 stainless steel and has a rolled outer edge to prevent damage to the cable. “The clip features a lead lip for easy handling and installation on all your solar projects involving Enphase microinverters.

The clip, with a part no. of NFI-1463, is the first clip that is designed to hold a single trunk cable, and eliminates the need for a clip holding multiple trunk cables when a customer is working with just one.

“The people we’ve talked to say it’s the best clip they’ve seen for this particular application,” said Vin Marino, Product Manager at Nine Fasteners Inc. “It works great, and with less material being used (than in a multiple clip), there’s less cost and therefore a lower price to the customer.”

Before the development of this new clip, installers still had to use a multiple trunk cable clip even when it might not have been necessary.

Nine Fasteners Inc. developed the clip in conjunction with: Enphase Energy, Quick Mount PV, and Ecolibrium Solar.

After several months of design and testing help from their partners, Nine Fasteners Inc. was ready to bring the clip to market.

“We’re very excited to be able to be the first to market with a clip with this functionality,” Marino said. “We believe the clip is going to serve a large need within the industry, and to be able to add this clip to the rest of our product lineup is something we’ve been looking forward to for a long time.”
