

America's DeckBuilder Achieves Award-Winning Results with C-Deck Star Drive Composite Deck Screws from Screw Products, Inc.

America's DeckBuilder Custom Decks & Railings of Barnegat, New Jersey, earned second place honors in the 2015 Best Overall Deck competition awarded by the NJ Chapter of the North American Deck & Railing Association (NADRA). Built adjacent to a 3,500 sq. ft. home in Manahawkin, New Jersey, the two-tier, 800 sq. ft. decking project featuring an octagon pergola and tumbling stairs was designed specifically with TREX® Transcend® deck boards and stainless steel C-Deck Star Drive Composite Screws from Screw Products, Inc. to combine long-lasting durability with unsurpassed aesthetics.

"Everything we do is quality," said Gary Daley, owner of America's DeckBuilder. "We only use top-shelf materials, which I personally handpick myself, and have always refused to sacrifice quality for economy. Over the past 20 years, we've received numerous accolades for our work. It is extremely rewarding to be recognized for our accomplishments and honored along with the industry's very best builders."

Since founding America's DeckBuilder in 1998, Daley has worked steadily building nearly 30 decks per year. This includes anything from 300 sq. ft. patio extensions to 2,000 sq. ft. bi-level "creations" custom-designed with flowing staircases, wet bars and numerous other amenities. Daley's latest award-winning creation fits into the more exotic category with two-levels, one 5-foot and the other 10-foot off the ground, as well as a cascading staircase flowing to the luxury home's built-in pool. The stainless steel C-Deck Star Drive Composite Screws from Screw Products, Inc. were also chosen not only for their stainless steel durability, but also their ability to blend neatly with the TREX Tiki Torch deck boards.

"No other technique provides as much structural integrity as face fastening," explained Daley. "You don't want anything pushing out, disintegrating or even delaminating after a few years. I only use the highest-quality stainless steel screws backed by manufacturers who stand by their products. This is especially important given that many of my customers are based along the Jersey shore in environments that suffer extreme temperatures and high acidity year-round."

"In business for nearly two decades, I can honestly say Screw Products, Inc. makes the best fastener out there today. Plus, they never strip or shear. There are some soft stainless steel screws that break easily. I never have this problem with Screw Products, Inc. There's no fading or delamination, and they hold up really well in pressure treated lumber."

C-Deck Star Drive Composite Deck Screws from Screw Products, Inc. are available in AC257 Compliant Coated and stainless steel designs for interior and exterior use with wood, composite and other plastic materials. The screws were also developed to eliminate the mushrooming and blemishes that can occur on composite materials, while providing an excellent choice for wood decks, where the top threads are needed to pull

down and lock the boards together. In addition, the C-Deck's durable color coating provides long-lasting corrosion resistance in even the harshest environments.

"Screw Products, Inc. run their operations like I run my business," Daley said. "Quality comes first, followed by an unwavering dedication to customer needs. When I mentioned my problems with acidity, they even volunteered to work with me to test the longevity of coatings in certain types of treated lumbers. We're both looking forward to the results, which should be available shortly."
