

Tectorius® Cost Saving Advancement in Pre-Applied Fastener Adhesive

Shelby Twp., Mich., June 22, 2015—Tectorius®, a global leader in adhesives, coatings and lubricants, is proud to introduce a new line of cost saving pre-applied fastener adhesives.

Since the introduction of pre-applied fastener adhesives, consumers of these highly specialized products had to choose between the costly transport of hazardous, solvent based products or water-based, slower output formulas.

Tectorius P-80G and P-85G (concentrated Global grade) can be shipped as non-hazardous, non-flammable, solvent based liquid. When ready for use, these concentrated materials are diluted with common, standard grade

solvent in a 3:2 ratio by volume, with no compromise in processing speed. The end products are direct replacements for many popular market grades offering up to 70% off freight costs by transporting smaller volumes and weights as a non-hazardous class, not available with other brands.
