

Wirestrap™ Self-Adhesive Fastener

Product Announcement from Argent International, Inc.

Simplifying fastening one application at a time

Wirestrap™ is a flexible, self-adhesive fastener that provides a number of advantages over traditional mechanical fasteners like pop-in clips and cable ties. Its self-adhesive design allows for installation on almost any vehicle surface without troublesome holes required by traditional fasteners.

Wirestrap's™ greatest advantage lies in its customizable design. It can be supplied in a variety of sizes, configurations, and a range of available fastening materials which enable Wirestrap™ to perform in a number of automotive applications.

U.S. Patent/s: 5,827,589, 6,698,068, 6,631,335

Primary Applications for Wirestrap™:

- Re-route a wire-harness path at any time in the design / manufacturing process
- Apply with conventional fasteners to stop rattles, pick up slack, & more...
- Utilize on specialty vehicles or optional equipment components
- Prevent damage: can't be over tightened, has a wider footprint
- Save on low cost design challenges and applications
- Solve most attachment challenges

How Wirestrap™ Works:

Wirestrap™ is designed for use in both permanent and temporary wire-harness fastening applications without the need for tools, holes, or other preparation. Wirestrap™ works in any manufacturing process. It can be applied at any stage of production and can be supplied on rolls, custom size pads, or as individual pieces.

Using Wirestrap™ couldn't be simpler. Just remove it from the roll by grasping the tail, and apply to the desired location (Figured 1). Remove Wirestrap's™ release liner to reveal the second adhesive surface, (B) and place the wire bundle just below the adhesive line. Fold the 'tail' over and press it firmly in place to achieve optimal adhesion (Step 2).
